

Project « History of Buckwheat »

Study the past to learn for the future

We are in the early phase of preparing goals, collecting ideas, searching for potential partners...

First suggestions for this project:

“(…) **Climate changes through history**. there are many open scientific questions, and there exists a group of people in Europe and Asia interested in such questions and debate from historical perspective, may be it could be some synergistic effect out of our possible cooperation.

“**Work plan** “AGAPI sarrasin1 Earth (2001)” from France can be developed and adapted to our needs »

“Suggestion for further research to look after:

1. **areas of growth**
2. buckwheat as a **staple food**
3. buckwheat as **medicine** «

“**Why limit the project to Europe and Asia ?** »
